

## Want to see more of Tanzania before or after this tour? We can help.

Consider these possibilities:

### *Climb Kilimanjaro*

An unforgettable experience! Mount Kilimanjaro [5,895m] is the highest mountain in Africa and the tallest freestanding mountain on earth. Crowned with an everlasting snow-cap, this majestic mountain can be found inside the Kilimanjaro National Park of Tanzania. A typical trek requires 7 days.

### *Soak up the sun, history, nature and culture of Zanzibar*

The World Heritage Site of Stonetown in Zanzibar brings together the architectural and cultural influences of Africa, Arabia, India and Europe in a way few places can match. But add to that the eastern beaches of the island, the Red Colobus monkeys of the Jozani Forest and the spice tours that sample the richness of Zanzibar's agricultural exports and you have the making of a very diverse and exceptional experience.

### *Experience the unique nexus of bush and beach in Saadani National Park*

The only national park in Tanzania on the coast, Saadani provides the unique mixture of sea, river and bush where elephants can be seen playing in the ocean. Stay at the Saadani Safari Lodge and associated tent camp at Miseni to get the real flavour of both the park and the culture of the coast. Here too, the Kesho Trust is working with another partner organization [Saving Africa's Nature] to develop the Kihembe Environmental Learning Centre in Mkange village. Visit the site and see the progress in working with the local village people.

### *Dive in the exquisite waters off Pemba or Mafia islands*

The islands off the coast of Tanzania provide some of the richest marine life and opportunities to get up close and personal that you will find anywhere. This is a diving Mecca where you will typically find visibility of twenty metres plus and at the very comfortable water temperature of 29 degrees.

### *Go for the ultra unique!*

Accommodation in Zanzibar and the associated experiences can be over and above the rest. Consider the Manta resort off the north coast of Pemba where you can stay in an underwater room! Or experience the world renown and award winning eco-resort of Chumbe Island where snorkeling is at its finest.

### *Come face to face with your ancestors*

Visit Jane Goodall's original 1960's observational research site in Gombe Stream National Park on Lake Tanganyika to meet the subjects of her investigations – the chimpanzees. The rainforests, alpine bamboo stands and grass-topped ridges are also a birders paradise while snorkeling in the adjacent lake provides similar viewing diversity.
